

Pole Setting Compound

A two-part structural compound that comes in lightweight, easy-to-carry kits. Just mix the two liquid chemicals and pour into the hole. When the two parts are combined, the compound expands up to 15 times its original volume and compacts the soil around the pole for stronger holding strength, more uplift resistance and improved safety. In just 15 minutes, the compound is set.

Part Number	Specifications
PSC1.0CUFT	<ul style="list-style-type: none">Reduces costs due to labor efficiency - sets in just 15 minutesEliminates the need for concrete and hauling rock and tampingIdeal in sand, rock and poor soil conditionsPrevents ground line pole decay or corrosionField proven with major utilities since 1988Works year-round in any temperatureClassified non-hazardous by EPA and DOTLightweight packageWorks well with various soil typesProudly made in the USA

EAGLE MOUNTAIN
— Flag & Flagpole —

The original foam backfill is the fastest and strongest for setting poles of all types.

- ✓ Saves Time
- ✓ Superior Holding Strength
- ✓ Suitable for Metal and PVC
- ✓ No Water or Mixing Tools Needed
- ✓ 3 Easy Steps: Mix, Shake, Pour
